2. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose the recited combinations of elements, including defining a periodic silence period for at least one carrier that is independent of reverse link channel frame boundaries; transmitting silence parameters that define the periodic silence period to mobile stations communicating with the base stations, wherein the mobile stations stop transmitting during the periodic silence period; and measuring the noise at each base station during the periodic silence periods, as in claim 1; defining a periodic silence period for at least one carrier that is independent of reverse link channel frame boundaries; transmitting silence parameters that define the periodic silence period to mobile stations; and measuring the noise at each base station during the periodic silence periods, as in claim 18; a transmitter to transmit signals to one or more base stations on one or more reverse link channels; a receiver to receive from a base station silence parameters that define a periodic silence period that is independent of reverse link channel frame boundaries; and a controller operatively connected to the transmitter and the receiver, said controller operative to shut off the transmitter during the periodic silence period, as in claim 35; defining non-synchronous and overlapping silence periods for at least two reverse link channels with different frame timing; transmitting silence parameters that define the periodic silence periods to the mobile stations, wherein the mobile stations stop transmitting on the reverse link channels during the periodic silence periods; and measuring the noise at each base station during the overlap in the periodic silence periods, as in claim 42; defining non-synchronous and overlapping silence

periods for at least two reverse link channels with different frame timing; transmitting silence parameters that define the periodic silence periods to the mobile stations, wherein the mobile stations stop transmitting on the reverse link channels during the periodic silence periods; and measuring the noise at each base station during the overlap in the periodic silence periods, as in claim 49; determine whether a frame overlaps a silence period, wherein the silence period is independent of frame boundaries; and to control the transmitter responsive to the determination whether a frame overlaps the silence period, as in claim 53.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
